Skills _____

- NextJs | TypeScript | Python | PostgreSQL | Mongodb | Node | Express | React | Redux | React-Router | NoSQL | TailwindCss
- ORM | Cloud Computing | CI/CD | Django | Unit Testing | Selenium | Git | Aws | Vercel | Docker | Javascript | Vitest | JWT
- Data Structures and Algorithms | Frontend | Backend | Full-Stack | English

Experience _____

Backend Web Developer

Ziko App Freelance Remote

04/2025 - 06/2025

- **Ziko** is an app designed to teach users English phonetics . It educates users on various topics including but not limited to Consonants, Vowels, Triphthongs, Stress, e.t.c.. It also has exercises and user progress tracking to ensure users learn efficiently
- Designed and implemented the **Backend API and Architecture** using **Express Js** and **Typescript** for the Server side code, **Postgresq**l for the Database Server, and **Kysely ORM** for easier integration with postgres
- Incorporated features such as User Authentication and Session Management using **JWT**s, Unit tests using **Vitest** and User progress tracking and updating
- Extensive and Detailed API documentation was also implemented using the OpenAPi spec

Full Stack Web Developer

File Vault

Personal Project

- Designed and developed a cloud based file storage with scalable storage infrastructure using Expressjs with Typescript for the Server and Mongodb for the Database Server. Typescript, TailwindCss, React + React Router for the frontend.
- The site features a powerful and efficient workspace where a user can perform **CRUD** operations on files along with multi-user access control through file sharing with other Users.
- There's also support for resumable file upload in cases of bad internet connection or any other even that may disrupt the file upload process
- Security features such as User Authentication, Cookie Session Management and File Encryption were also implemented

Backend Web Developer

Bizease

Internship Project

- Bizease is a business management website for small and medium-sized enterprises built during the **Techies Collab and Upskill** Internship Cohort 3.0. The backend **API** was built with Python's **Django** Framework
- Collaborated with other backend developers as well as our frontend counterparts on the team I was assigned to develop features such as User authentication and verification, User session management via **JWT**s, User Inventory Management, User product Orders management and other features as stated in our **PRD**.
- Implemented Reports endpoints that return data containing general details about a User's business performance including Sales made during a specified period of time, Total Stock Value, Current Revenue, percent change in Revenue, etc.

Full Stack Web Developer

DMDB

04/2024 - 08/2024

- Led the design and development of an interface to the TMDB online movie database using HTML, CSS and Vanilla JavaScript,
- Incorporated advanced features such as **Media categorization**, **Best match searches**, **Beautiful and functional UI**, and **Scalable API integration** to provide seamless information to movies, tv shows, video games and the film industry.
- Completely automated the database platforms' user-experience testing process by integrating Nightwatch.js and Selenium.

Education ______

Undergraduate at the Federal University of technology, Akure, Nigeria.

Other Projects _____

- Quiz4U: Comprehensive quizzing platform using the NextJs React Framework, Typescript, Postgresql RDBMS,
- Markdown Parser: Developed a Markdown Parser using Typescript and Nodejs
